

Minutes of Meeting

Group: Group 2 — CS350 Object-Oriented Programming in Java Subject: Week 1 Team Project Proposal Date: 26th August 2026 Time: 20:00 Venue: In Person

Present:

1. Natasha Mwamba (24167277)
2. Daniel Kapira (23147045)
3. Gift Chewe (23144808)

Apologies: None recorded

Chairperson: Daniel Kapira Minutes taken by: Natasha Mwamba

1. Call to Order The meeting was called to order to discuss and finalize the group's Week 1 Team Project Proposal for CS350.
2. Agenda
3. Confirm project title and background
4. Agree on the problem statement
5. Identify target users
6. Discuss proposed solution
7. Set project objectives
8. Define project scope
9. Confirm MVP features
10. Assign next steps
11. Matters Arising / Discussion

3.1 Project Title The group agreed on the project title "Classroom Booking System," to be hosted at <https://github.com/DGKapira/Java-Project-CS350-.git>.

3.2 Background It was noted that classrooms on campus are shared by many lecturers and student groups. While official classes are handled by central timetabling, ad-hoc use of rooms is arranged informally, and there is no shared, up-to-date way to check availability and book a room.

3.3 Problem Statement The group agreed that students and lecturers often cannot tell which classrooms are free at a given time, causing wasted time, double-booking, and interrupted classes or meetings. It was agreed the system should let users check availability and book with confidence.

3.4 Target Users The group identified three user groups: Lecturers — need to find and book a free classroom for extra classes, consultations, or meetings. Students — need to book rooms for group study, project meetings, or society activities. Administrators — need to upload timetables and manage classrooms.

3.5 Proposed Solution It was agreed the group will build a Java application allowing users to search room availability by date/time, view rooms as Available or Occupied, and book a room while the system blocks overlapping bookings. Administrators will upload the official timetable so scheduled lectures show automatically as Occupied. The system will use a database with Users, Classrooms, and Bookings tables.

3.6 Objectives The following objectives were agreed:

1. Allow users to search classroom availability by date and time range.
2. Display real-time availability status (Available / Occupied).
3. Allow users to book an available classroom.
4. Prevent double-booking of the same room/time.
5. Maintain accurate records of users, classrooms, and bookings.
6. Allow administrators to upload official timetables.

3.7 Scope It was agreed that the initial scope will include searching, booking/cancelling a single room, and preventing overlapping bookings, plus admin timetable upload. It was agreed that calendar sync, recurring/multi-room bookings, a mobile app, and automatic conflict editing are out of scope for now.

3.8 MVP Features The group confirmed six MVP features: search by date/time, availability display, booking, double-booking prevention, user accounts, and admin timetable upload.

4. Action Items

5. Submit finalized Week 1 proposal — Responsible: All — Deadline: 2nd September 2026
6. Set up GitHub backlog/issues for MVP features — Responsible: Gift Chewe — Deadline: 2nd September 2026

7. Begin database schema design (Users, Classrooms, Bookings) — Responsible:
Daniel Kapira — Deadline: 2nd September 2026
8. Any Other Business None raised.
9. Date of Next Meeting 2nd September 2026

Minutes approved by: Daniel Kapira Date: 26th August 2026
